

# How to use Streetmix

## Sample Street

1. Name the street and set the width at 60 feet.
2. Think about who needs to use the street you design (Buses? Bicycles? Parking?)
3. Choose from the street pieces at the bottom of the screen (Sidewalks, trees, etc.)
4. Drag and drop them into place. Careful not to exceed the width of the street!
5. Resize them as desired.
6. Repeat until you've got West Main Street the way you like it.
7. Save your street!

## Typical sizes of street elements

- Drive lanes 10-11 feet (wider if it's shared with buses or bicycles)
- Parking lanes 7-8 feet
- Bike lanes 5-6 feet
- Trees/street furniture area 4-5 feet (can go together)
- Bus shelter 7 feet
- Sidewalk 6 feet (shops and restaurants prefer 8-10 feet)
